

Patterns in Chicago Crime

A data-driven look at urban risk for insurance professionals

Join our upcoming presentation which examines spatial, temporal, and categorical patterns in Chicago crime to reveal how incidents cluster and evolve across the city. By integrating multiple dimensions of the data, we help you understand what risks you may be overlooking.

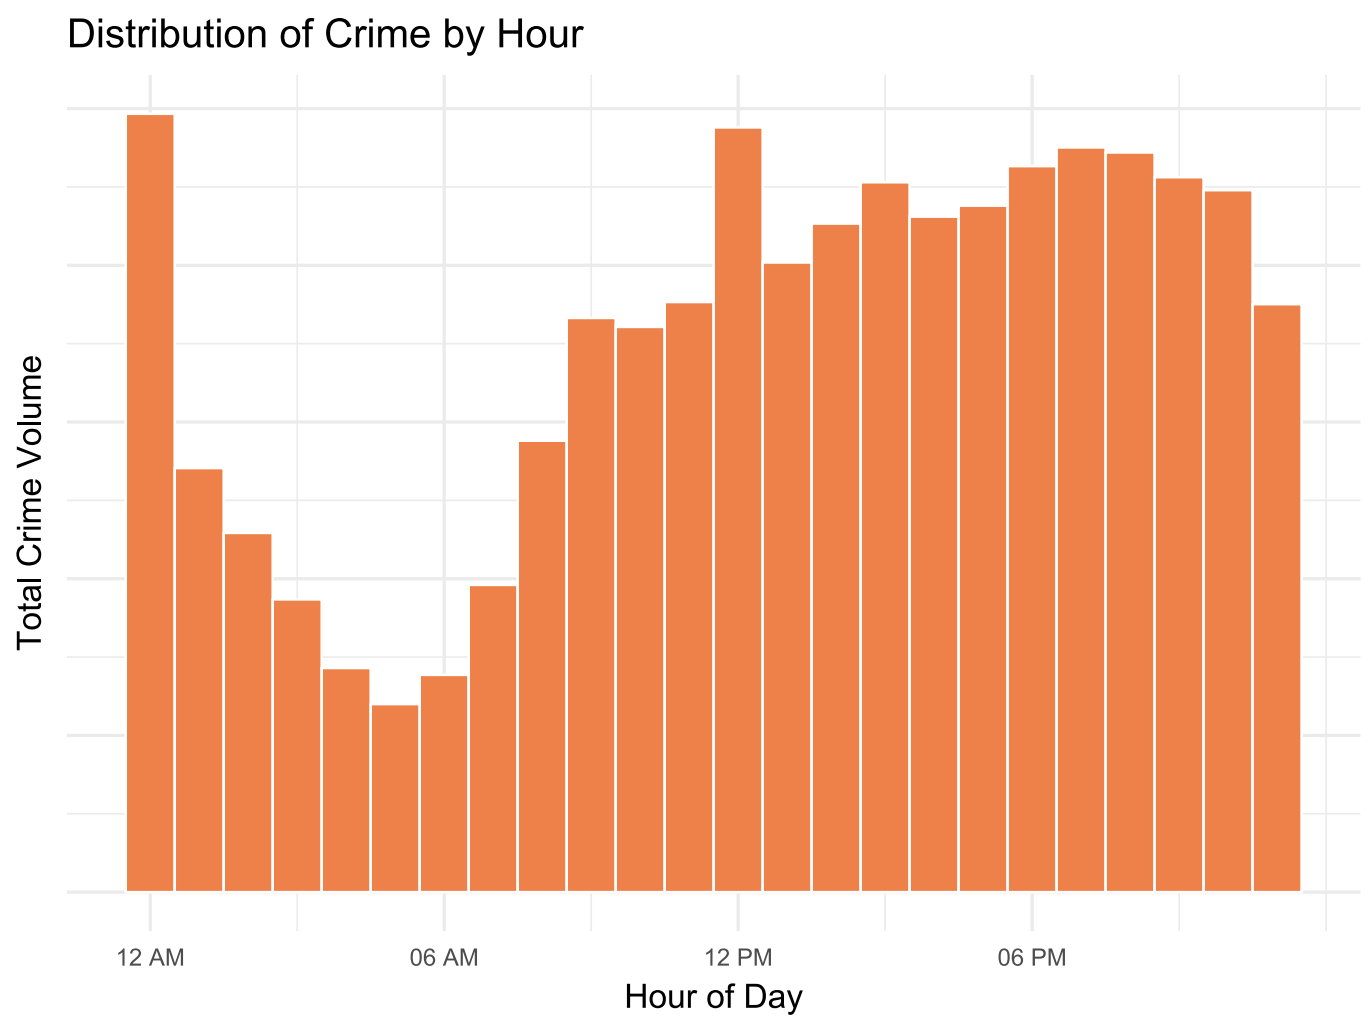

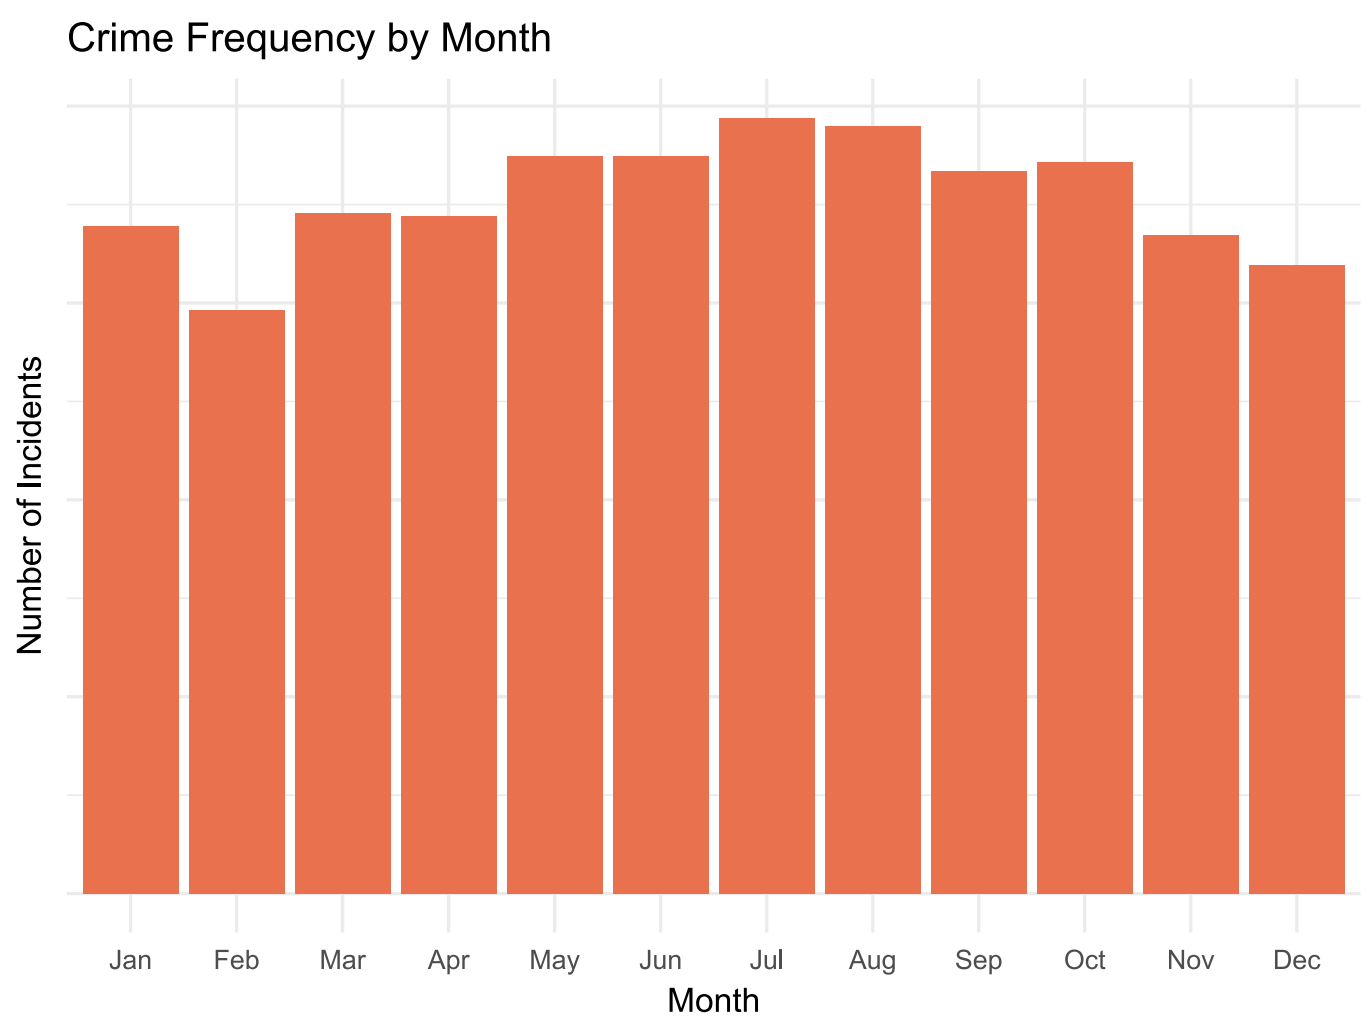

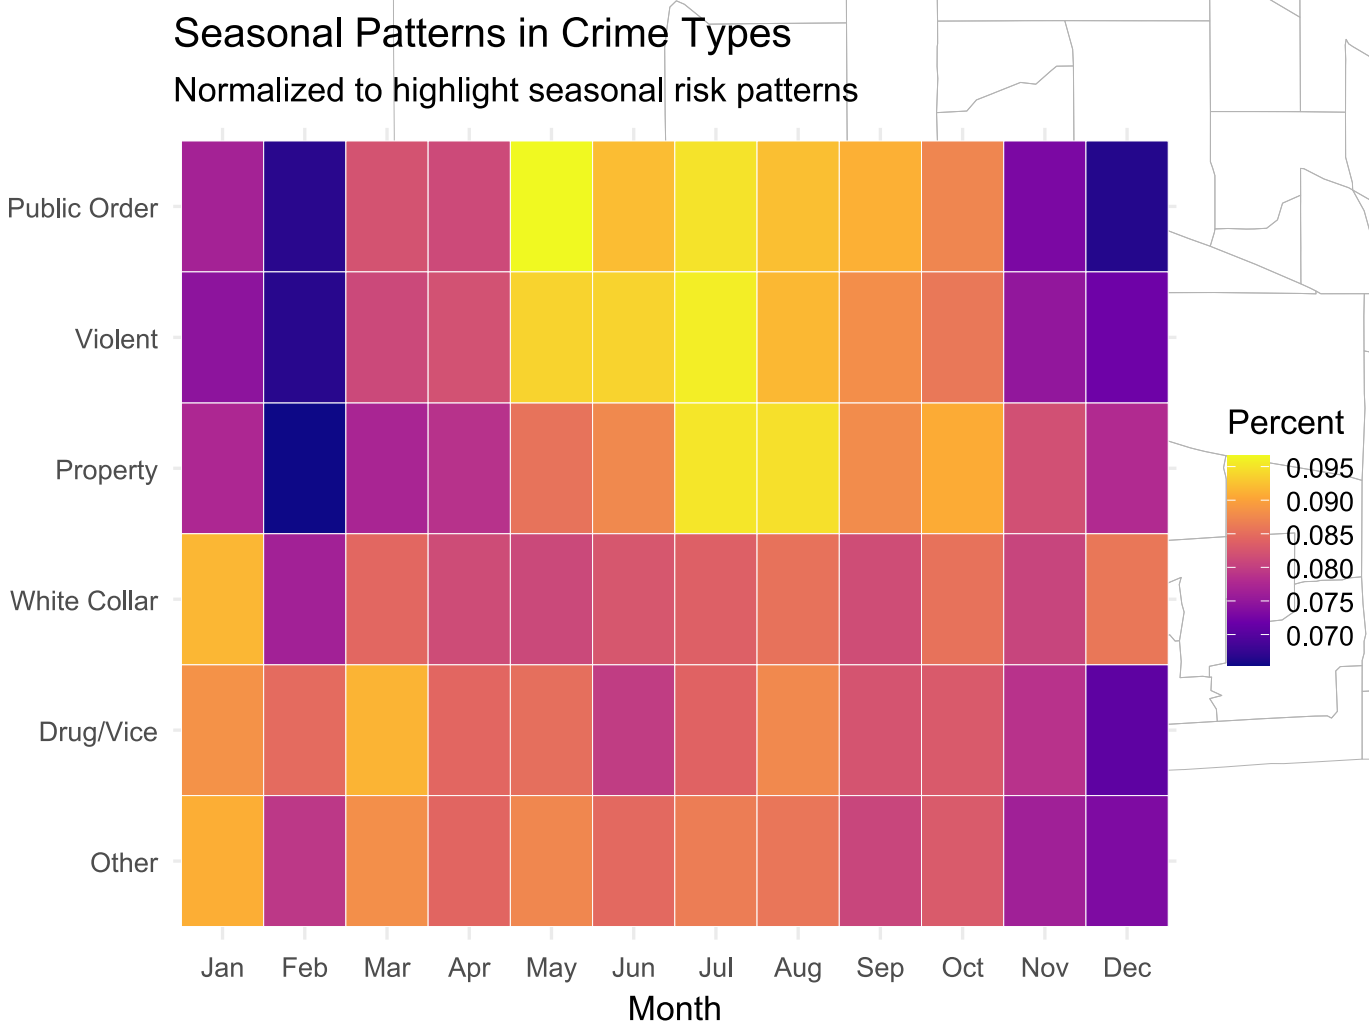

Explore the data with this interactive visualization

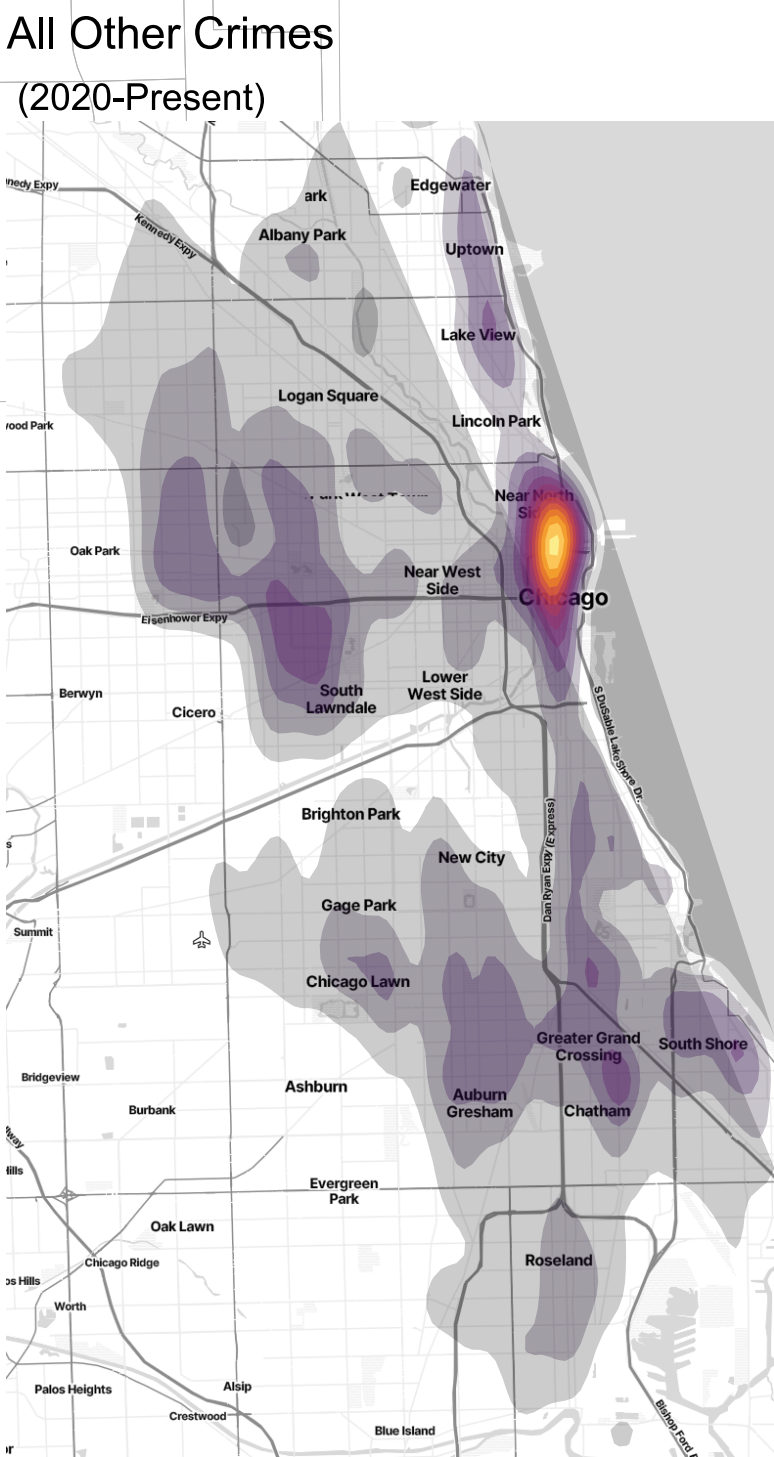

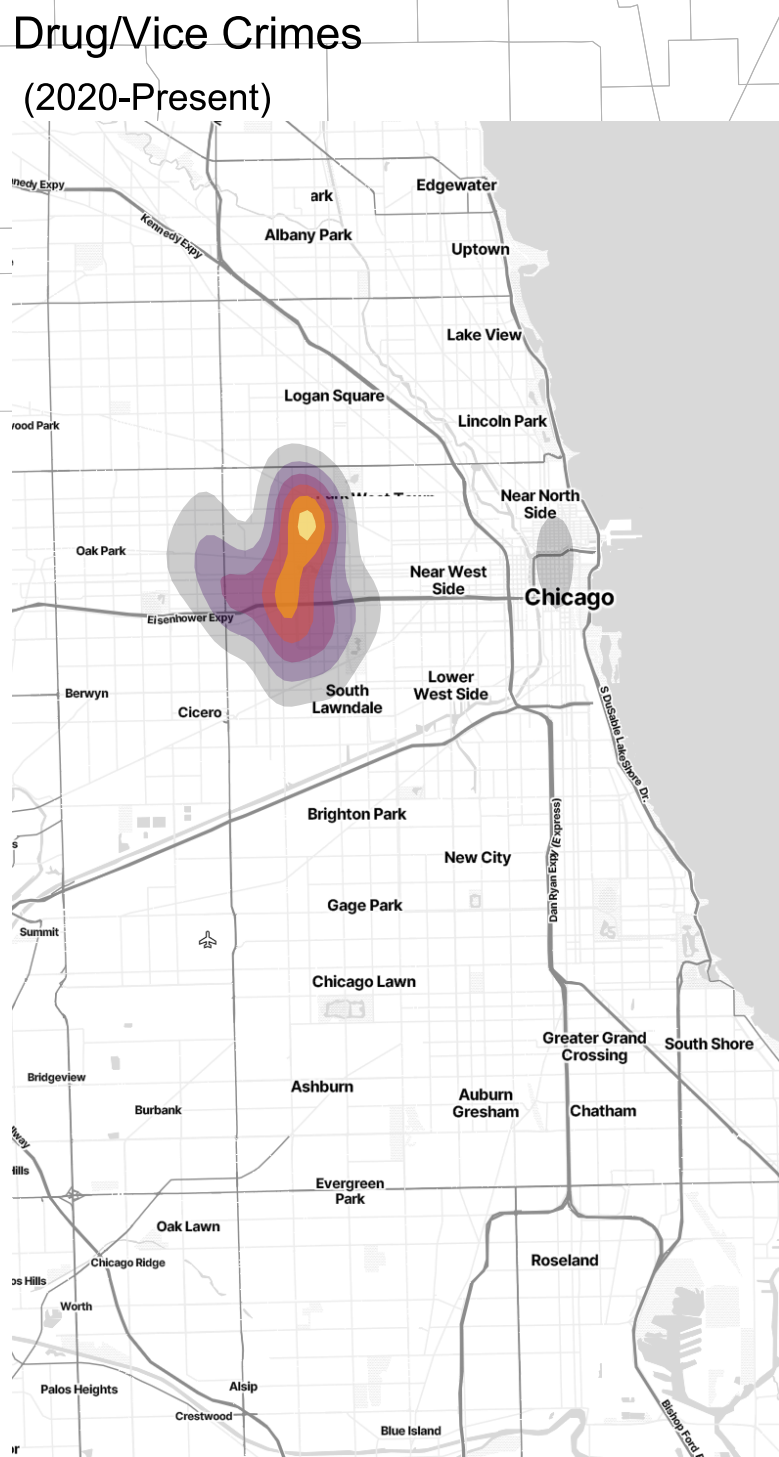

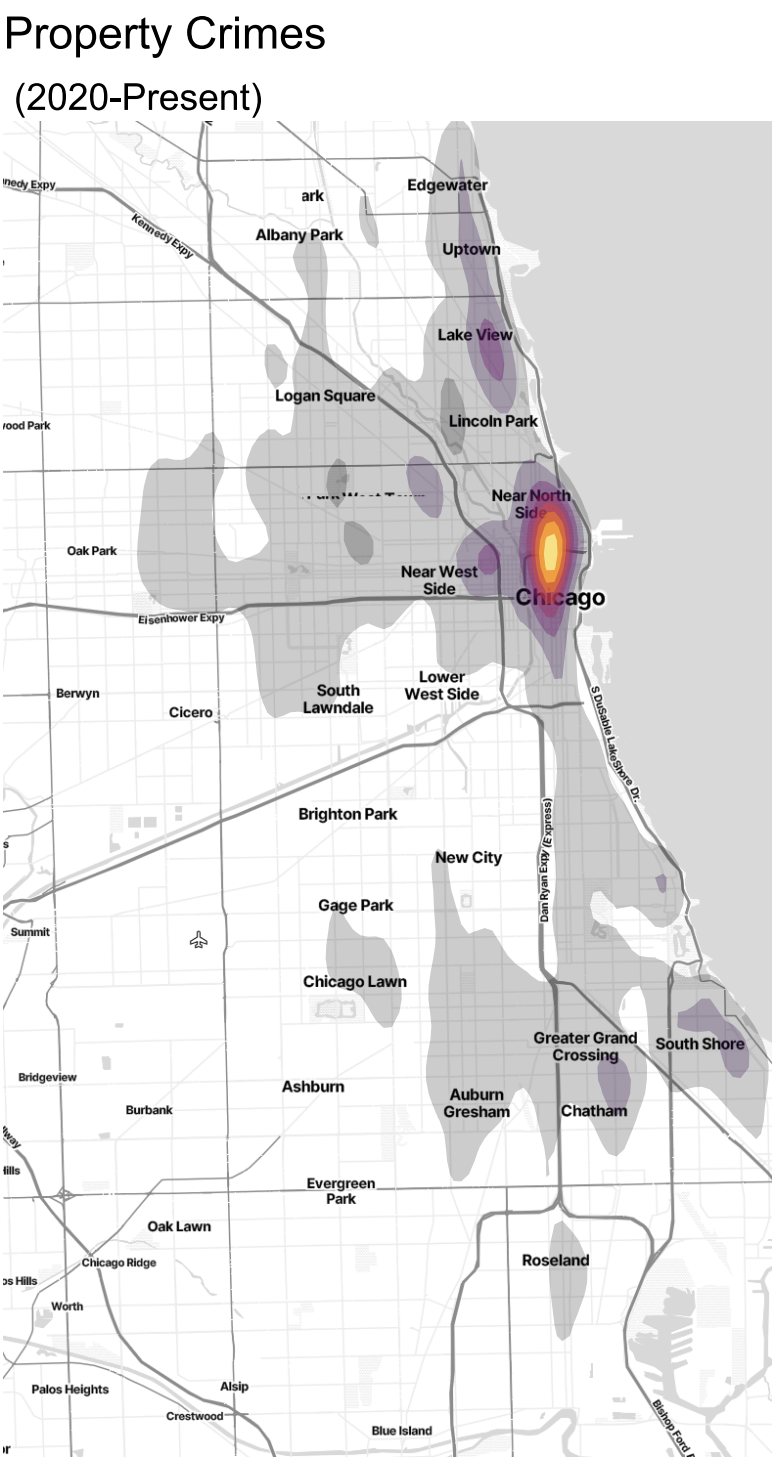

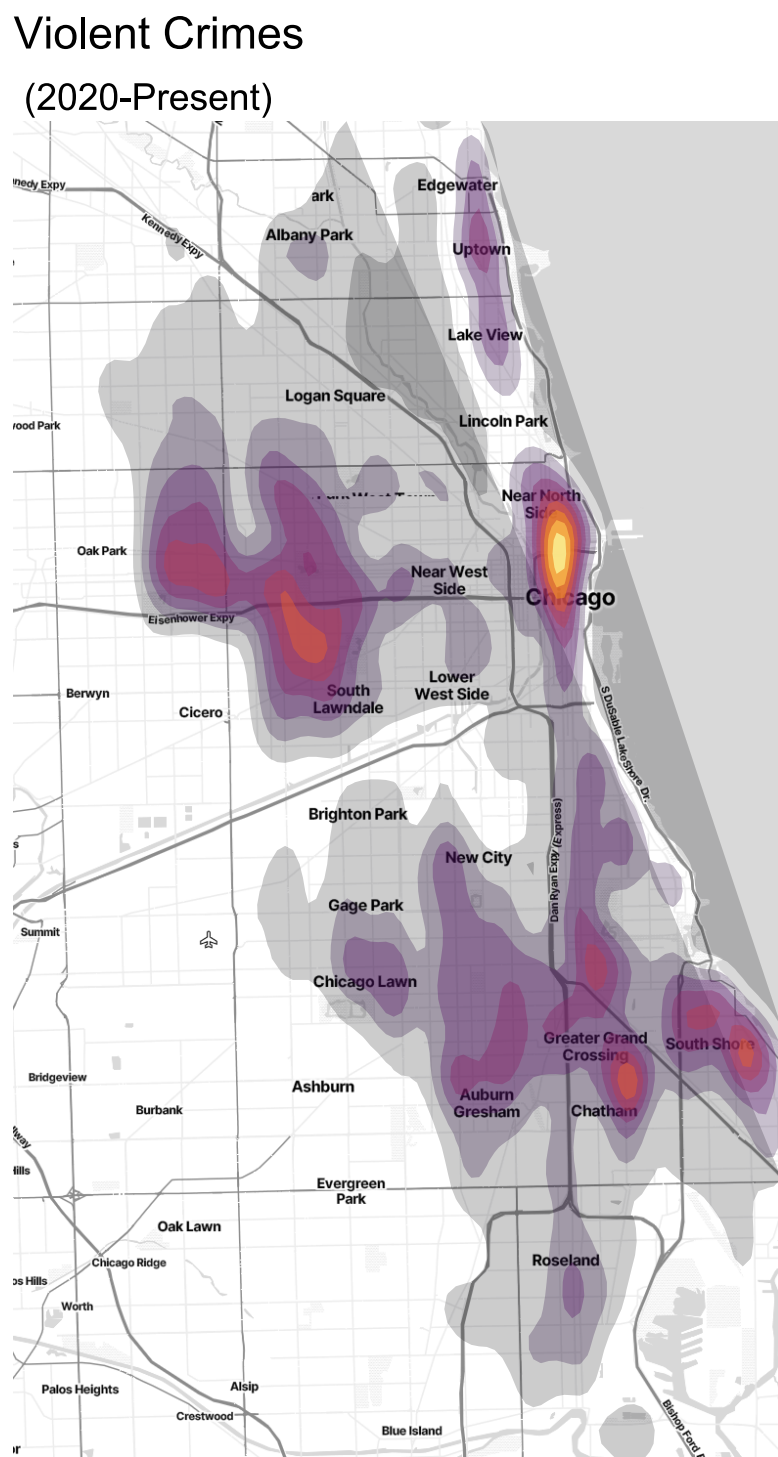

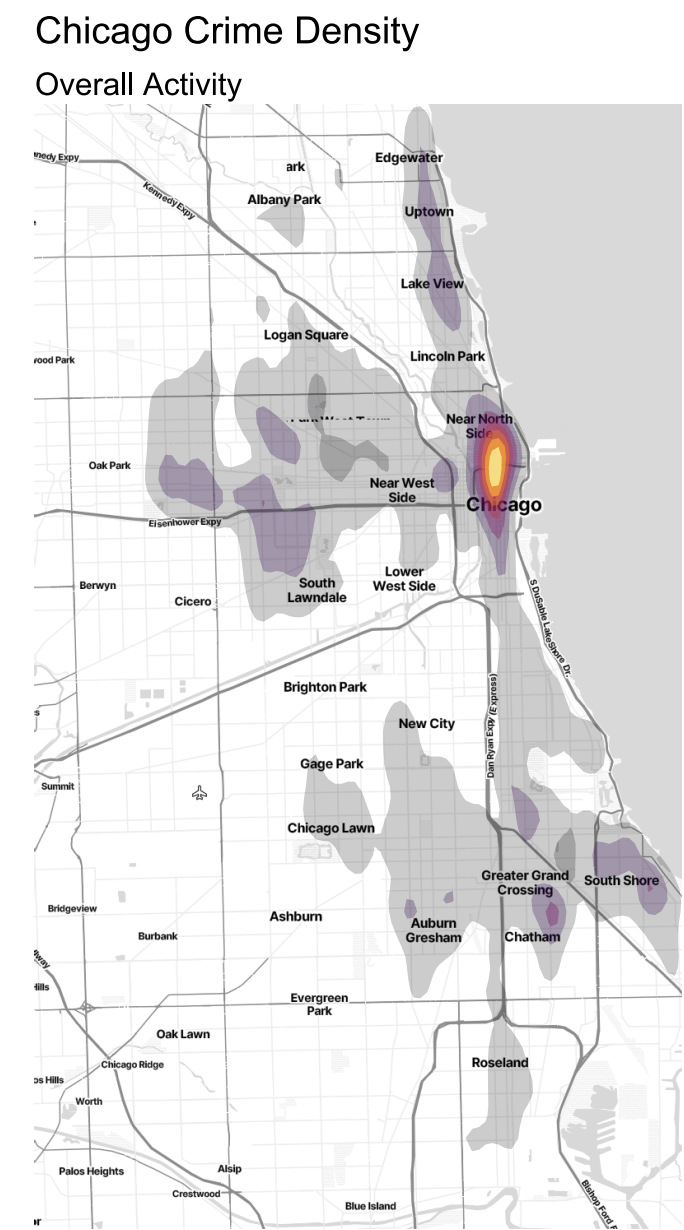

Our session will dive deep and help you get to know
How do crime rates vary across Chicago neighborhoods when considering both crime type and time of year?
Which types of crime are most strongly associated with specific geographic areas, and how might these patterns influence risk exposure?
Is arrest likelihood related to the combination of crime type and location, and what might this imply for claims predictability?

When Crime Occurs

See data at all levels

Take a deep dive in to the geography of the data!

Our talk gives insurers a clear, data-driven view of where risk concentrates, how it shifts over time, and which crime categories drive exposure in different neighborhoods.

Join us as we explore twenty-plus years of patterns and instantly see the hotspots that matter for underwriting, pricing, and portfolio strategy. If you work in risk, claims, or analytics, this is the map you wish you had years ago.

Come see how multidimensional crime data can sharpen your models, reveal hidden trends, and support smarter decisions across your entire book.

Where Crime Happens
